Yubii™

MyNice Welcome app

With MyNice Welcome, you can configure and control Nice devices with a single APP directly from your smartphone via **Core**, the **Nice** Wi-Fi-Radio gateway.

The new Yubii ecosystem now gives you even greater control over your automations.

Available free on

Everything under control

If your smartphone has an internet connection, you can also view the status of each individual automation and control it wherever you are via the Nice Cloud.

All Nice technology at your fingertips!

The MyNice Welcome App lets you configure and control the system locally, even without an internet connection.

With a simple click, you can update the IT4WIFI interface and Nice Core Wi-Fi-radio gateway, download the events log and view automation activations and diagnostics.

Practical

You can control Nice group automations and create scenarios and rules remotely, combining sensors, remote controls and automations (the smartphone and Core communicate via the Wi-Fi network).

Smart

With the dedicated accessories, you can now:

• **associate** and save all home devices, such as sensors, remote controls and automations;

• **configure** the parameters of the bidirectional sensors and verify their status (battery, FW version, etc.);

• **add** more functions to a key on the remote control, while maintaining the original settings (for example, if pressing a key opens the gate, you can now add other functions, such as the simultaneous or delayed switching of the garage light or activation of an existing scenario);

• **create** scenarios involving all the saved devices, or activate the functions of an automation with an event (pressing a button, sensor activation, scheduling), for example, close the rolling shutters at your preferred time of day (scheduling) or when the wind sensor sends an event (sensor activation).
